## Network Software Installer: System 6.0.x Support (5/95)

Article Created: 15 May 1995

TOPIC -----

What is(are) the proper version(s) of Network Software Installer that I should use to upgrade the networking software on all of my Macintosh computers?

DISCUSSION -----

All Macintosh computers running System 6.0.x should be upgraded with Network Software Installer (NSI) 1.4.5. The most recent release of NSI, Network Software Installer ZM-1.5, is not supported for System 6. This installer works on only System 7 or later Macintosh computers.

All Macintosh computers running System 7.x should be upgraded with NSI ZM-1.5. This is the most recent version of NSI which can only be installed on Macintosh computers running System 7.
