MacDNS and International Date Issue, Workaround (5/96)

Article Created: 11 May 1996

TOPIC -----

This article provides a workaround for users experiencing an issue with MacDNS and certain international date settings.

DISCUSSION -----

It turns out that some code assumed that the first separator in the abbreviated date string was a comma. Some date formats do not use a comma separator after the day of the week.

For example:

Thu, Jan 2, 1992 <-- OK
Gio, 2 gen 1992 <-- OK
tor 2 jan 1992 <-- no comma after day of week, the issue appears

If you are experiencing this issue, the workaround is to open the Date & Time control panel, click the Date Formats... button, and enter a comma after the day of week.
