Network Assistant: Workstation Access Denied (8/96)

Article Created: 23 July 1996
Article Reviewed/Updated: 1 August 1996

TOPIC --

I configured a group of workstations to administer with Network Assistant.
Today the status of one of the workstations shows "Access Denied". What can
cause this?

DISCUSSION ---

You will get this status displayed if you change the workstation's Network
Assistant password after you have added it to a workstation list. You must
remove the workstation from any list it is on and add it to the list again to
access it from Network Assistant.
