Network Assistant and Copying Hard Disk (8/96)

Article Created: 30 July 1996

Article Reviewed/Updated: 1 August 1996

TOPIC -----

I have a two identical computers, and I am trying to copy the hard disk from one computer to another using the Apple Network Assistant, part of the Apple Network Administrator Toolkit (ANAT). I'm choosing All other items in the Copy Hard Disk dialog box. The target computer has a 400 MB hard disk; the information I am trying to copy is 390 MB.

When I try to copy, I get a message that there is not enough space on the target drive to copy. What is wrong?

DISCUSSION -----

Make sure your target computer does not have virtual memory turned on. Virtual memory allocates space, for its use, on the hard disk in the amount set in the Memory control panel. Turn off virtual memory and restart, this should let you copy to the target computer.
