Apple Telecom 3.0 & Keyboard Character No Longer Works (1/97)

Article Created: 20 January 1997

TOPIC ---

This article describes a situation where a keyboard character no longer works
after installing Apple Telecom 3.0.

DISCUSSION --

If a keyboard character is not working after installing Apple Telecom 3.0, below
is a description of what may have happened.

While in Apple Phone if you:

1) clicked the Opens Preferences Window button or choose Preferences under
   the edit menu,
2) clicked the Modem option,
3) selected the "use the key combination for answering/hanging up any
   application",

the default is set to command-space. If you set this to the letter "A" for
example, this letter will continue to function in key caps but will stop working
in other applications.

Try changing the key character set in "use the key combination for
answering/hanging up any application", to a more unique key combination to
resolve this.
