X on Performa Control Panel at Startup (7.1p3 or Greater) (3/95)

Article Created: 27 July 1994
Article Reviewed/Updated: 16 March 1995

TOPIC ---

When I startup my Macintosh Performa a red 'X' appears through Performa control
panel icon. What happened?

(Note the 'X' will be black on a Macintosh Performa 200.)

DISCUSSION --

There are several reasons why you might be getting a red 'X' through your
Performa control panel icon at startup:

• You have renamed either the Applications folder or the Documents folder
  or both of these folders.
• You may have thrown away either the Documents or Applications folder.
• There may be a duplicate of the Performa control panel in the System
  Folder.
• There may be damage to the Performa Shutdown Check file or the Performa
  Preferences file.

To get rid of the 'X' do the following:

• Rename each folder to its original name.
• Throw away the duplicate Performa Control Panel from the System Folder.
• Open the Preferences Folder>System Folder and throw away the Performa
  Shutdown Check and Performa Preferences files.
• Restart the computer.

ADDITIONAL INFORMATION
======================
When the Macintosh Performa computer starts up, the Performa Control Panel
searches for two folders on the hard drive: Applications and Documents. If it
finds that either folder has been renamed, it places a red 'X' over its icon at
startup to warn you of feature(s) you have disabled.

If either the Applications or Documents folder is GONE from the hard drive (not
renamed, but removed), then the Performa control panel icon will have a red 'X'
at startup INITIALLY, and upon further restart, will recreate the missing
Applications folder on the hard disk and the Documents folder on the desktop.
