Macintosh Performa: How Do I Use the ARA CCL? (11/95)

Article Created: 27 November 1995

TOPIC -----

I have a Macintosh Performa computer. I have an Apple Remote Access (ARA) file called ARA CCL on my hard drive. When I double-click it, I get a message telling me to put it in my Extensions folder. Even if I place it in my Extensions folder and restart, I get the same message. What is Apple Remote Access? How do I use this software?

DISCUSSION -----

Apple Remote Access software provides an easy way to connect a desktop Apple Macintosh or PowerBook computer to another Macintosh computer at a remote location over telephone lines.

Some modem equipped Macintosh Performa computers have an ARA modem script (also known as a CCL file) installed on the hard drive. The file is used to configure your modem to work with the Apple Remote Access software.

Your Performa computer does not include the Apple Remote Access software that uses this CCL file. The file is included on your hard drive so it is available if you decide to purchase ARA. Leaving the file in your System Folder or on your hard drive will not affect the operation of your computer.

You can purchase the Apple Remote Access Client software from your Apple-authorized dealer.
