PlainTalk 1.3 and PlainTalk 1.2: System Compatibility (7/95)

Article Created: 23 August 1994
Article Reviewed/Updated: 25 July 1995

TOPIC ---

Is PlainTalk version 1.3 compatible with System 7.1.2? We find it crashes when
run with 7.1.2 systems.

DISCUSSION --

We installed PlainTalk 1.3 on a Power Macintosh with System Software 7.1.2
installed. It did not "crash" the CPU, but every time we tried to open a folder
or file we received an error message that "Finder got an error: Apple Event
timed out."

Checking the Read Me file that was installed with PlainTalk 1.3, showed this
release was, "designed to work with System 7.5 only on Macintosh Quadra 840AV,
Macintosh Quadra 660AV, and Power Macintosh computers".

We recommend the following:

Version	O/S Version	CPU
PlainTalk 1.3	7.5 or 7.5.1	Quadra 660AV and 840AV, All Power Macintosh computers except the 5200 series
PlainTalk 1.2	7.1.2	All Power Macintosh computers except the 5200 series
PlainTalk 1.2	7.1, 7.1.1	Quadra 660AV and 840AV

Article Change History:
25 Jul 1995 - Added information on the Power Macintosh 5200.
26 Apr 1995 - Added System 7.5.1.
14 Feb 1995 - Reviewed for technical accuracy.
