Speech Recognition: Speakable Items Won't Run (9/96)

Article Created: 3 September 1996

TOPIC -----

Whenever I attempt to use the English Speech Recognition capabilities of PlainTalk 1.4.x, an error occurs stating: "Speakable items could not run because an unexpected error occurred. Restarting your computer or reinstalling the Speech Recognition software may correct this problem."

I have attempted to resolve this error by reinstalling the Speech Recognition software, but it still occurs.

DISCUSSION -----

Several things could be causing the error message to occur. Check the following:

- * Verify that there is not a folder in the Speakable Items folder.
- * Verify that you have enough memory available
- * Verify that the following items are installed and enabled in the System Folder:
 - Speech control panel
 - Finder Scripting extension
 - AppleScript extension
 - Speech Recognition extension
 - Speech Manager extension
 - MacinTalk 3 extension
 - Speakable Items extension
- * Verify that the Voice folder is in the Extensions folder and that it contains several voice files (including "Fred")
