File Assistant: Manual Synchronization (6/93)

Article Created: 7 June 1993

TOPIC -----

Manual updates allow you to choose when to update a linked pair of items. When you make a change to a file on one disk, the PowerBook File Assistant doesn't update that file on the other disk until you tell it to. This article tells you how to use manual synchronizer with the Synchronizer software of File Assistant.

DISCUSSION -----

Manually synchronize linked files at any time following these steps:

- 1) Choose Manual from the Synchronize menu with the pair selected.
- 2) Click the arrow between the two files in the synchronization window.
- 3) Continue to click the arrows for all the pairs you want to update.

You can also manually update files that are linked by choosing Synchronize Now from the Synchronize menu with the pair selected.
