MPW: Projector Is Macintosh Equivalent of Panvalet on a PC

This article last reviewed: 30 August 1989

TOPIC -----

Is there a program for the Macintosh that is similar to Panvalet for the IBM?

DISCUSSION -----

Panvalet is used for software development project management on PCs. To locate a similar program on a Macintosh, one doesn't have to look any further than MPW 3.0, which contains Projector. Projector is an easy-to-use collection of built-in MPW commands and windows that help programmers, individually and in teams, to control and account for changes to all the files (documentation, source, applications, and so on) associated with a software project.
