Macintosh Pascal 1.0: Screen Echo

To defeat the echo to the screen when entering data from the keyboard, use
the GET statement rather than the READ statement. For example:

```
Program No_Display(input, output);
 Var
   i:integer;
   v:array [1..10] of char;
 Begin
  i:=1;
  Writeln('Enter 10 Character Password:');
  While i <=10 do
   Begin
    Get(input);
    v[i]:=input^;
    i:=i+1;
   End;{while}
End.
```
