Macintosh Pascal Discontinued but Supported: Update

This article last reviewed: 31 August 1990

TOPIC -----

Is there a product called MacPascal? If yes, what is the latest version, and is it an Apple's product?

DISCUSSION -----

Macintosh Pascal was discontinued many years ago. The latest version shipped by Apple was version 2.1. Although we no longer ship it, we continue to support the product (though we rarely get any questions on it since most people have migrated to newer products).

There are many substitutes, including Think Pascal from Symantec, which could be used in conjunction with an interactive tutorial called Just Enough Pascal, also from Symantec (these, as well as others, are described in the buyer's guides on AppleLink).

We'll update the article "Macintosh Pascal Is Discontinued But Supported" in the Tech Info Library with this information.
