Modula 2: Available for the Macintosh

This article last reviewed: 18 June 1990

TOPIC -----

Is there a Modula 2 vendor for the Macintosh?

DISCUSSION -----

We found two sources of Modula-2 in the MENU/Software Library on AppleLink:
Power System-Modula 2 and MetCom Modula-2.

Pecan Software Systems's Power System-Modula 2 is a complete development environment with powerful programming tools along with a Modula-2 compiler. Power System-Modula 2 adheres to Wirth's Third Edition, separate compilation of modules, conditional compilation, nested include files, process synchronization, sets with up to 4080 elements, access to low-level system calls, extensive module library (source available) support packages available (including Pascal to Modula-2 translator, software tools), integratable with other languages (UCSD Pascal, Fortran-77, BASIC).

MetCom Modula-2 from Metropolis Computer Networks is an integrated Modula-2 development system comprised of a text editor, native code compiler, dynamic linker and source debugger.
