QuickDraw GX: Converting Type 1 Fonts (2/95)

Article Created: 9 September 1994
Article Reviewed/Updated: 15 February 1995

TOPIC ---

During the installation of QuickDraw GX on a Macintosh running System 7.5, the
installer will automatically convert any Type 1 fonts that are installed.

DISCUSSION --

This process will "double" the amount of disk space currently required by any
installed Type 1 fonts. The reason for this is because after the installation,
the Type 1 fonts will exist in their converted format and also in their original
form within a "•Archived Type 1 Fonts•" folder in the System Folder.

If a customer has many megabytes of Type 1 fonts installed, this could be an
issue.
