System 7: What the Find Command Beep Means

Article Created: 4 March 1991

Article Change History

08/24/92 - REVISED

- To give additional information.

TOPIC -----

Why do I only get a beep sound when I try to use the Find command?

DISCUSSION -----

The beep sound means that Find could not find any more files with the search criteria you specified. When an icon is found, the Find command opens the window where that icon resides and selects it for you.

When the Find command fails to locate a single item that fits your search criteria, it displays the message "No matching items were found."
