## System 7: Hiding Previous Application when Switching to Another

Article Created: 5 June 1991

### Article Change History

-----  
08/24/92 - REVISED

- For clarity and accuracy.

### TOPIC -----

Under System 7.0, can I switch to another running application and hide the current application in one step?

### DISCUSSION -----

Yes. Hold down the Option key and select the application to which you want to switch by clicking in a window or selecting the application from the Application menu. This hides the current application--even any windows open in the Finder (though items on the desktop remain visible).
