TOPIC ---

How do I install FKEY resources to be used with System 7?

DISCUSSION --

As in System 6, FKEYs must be installed using a "resource moving" utility
like ResEdit (version 2.0 or later).

Installing System 7 over a previous system does not remove FKEYs that were
already installed in your system.

Note: The screen-capture FKEY (invoked by pressing Command-Shift-3) has
been much improved in System 7. When you press Command-Shift-3, the system
takes a "snapshot" of your screen and creates a TeachText file of the
image. The resulting file contains an accurate image of your screen, even
displaying colors and the image from multiple attached monitors.
