             • For technical accuracy.

TOPIC ------------------------------------------------------------

Can I upgrade another Macintosh from my own machine over the network?

DISCUSSION -------------------------------------------------------

No. While it is possible to install System 7 on a Macintosh computer over
the network, it is not possible to force the installation of System 7 on
all other Macintosh computers on the network.  To upgrade multiple
Macintosh computers concurrently, it is necessary to initiate the
installation from each Macintosh computer.
