- For technical accuracy.

### TOPIC -----

I removed my printer drivers from the Extensions folder and deleted them. When I reinstalled the system software, the Printing disk displayed this message: "The selected disk 'Hard Disk' does not require a printer update." However, when I chose Customize and "Software for LaserWriter" it installed the proper driver. Is the Installer confused?

### DISCUSSION -----

If the PrintMonitor is in the Extensions folder, the Installer on the Printing disk will indicate that you don't need to update. The Installer on the Install 1 disk will allow you to install a specific driver using Customize. Remove the PrintMonitor to do an Easy Install.

There's a good reason for this. The Installer on the Printing Tools disk is for System 6. The preferred method is to use Customize from the Installer on the Install 1 disk.
