TOPIC -----

Do I still need to install the Communications Toolbox with System 7?

DISCUSSION -----

With System 7.0, you no longer need to install the Communications Toolbox. Everything that previously needed to be manually installed into the System under the 6.0.x is now included with System 7.0.

Also, there is no longer a Communications Folder. All tools are placed in the Extensions Folder instead. If you are upgrading from System 6.0.x to System 7.0, move the tools to the Extensions Folder and delete the Communications Folder.

The System 6.0.x version of the Communications Toolbox is 1.0; only minor changes were made for System 7.0, and that version is labeled 1.0.1. As long as you have the latest version of System 7.0 you'll have the latest version of the Communications Toolbox.
