TOPIC -----

I receive the error message "Couldn't open the printer driver" when trying to use Adobe's Font Downloader under System 7. How do I fix this?

DISCUSSION -----

Font Downloader expects the LaserWriter driver to be in the System Folder, while System 7 normally installs it in the Extensions folder. Simply move the LaserWriter icon from the Extensions folder into the System Folder to correct this problem. System 7 will still be able to locate the LaserWriter driver without a problem.

For the most current information on Adobe Font Downloader, including upgrades that may change this situation, contact Adobe directly. To locate Adobe's address and phone number, use the vendor name as a search string. Copyright 1991, 1992, Apple Computer, Inc.
