System 7: Page Size in Page Preview

Article Created: 8 August 1991

Article Change History

09/17/92 - REVISED
            • To take out version numbers of applications.

TOPIC ---

Under System 7, with the LaserWriter Driver, if I select one of the custom
paper sizes such as "Envelope - Edge Feed" and then switch over to Page
Preview (if the application has Page Preview), I see a letter-size paper,
not an envelope size paper. Why is this?

DISCUSSION --

Most applications ignore the resource that holds the information about the
selected custom paper size. FileMaker Pro shows an envelope when you
select this option. Currently, Microsoft Word, Excel, 4th Dimension, and
other applications do not.
