TOPIC ---

I can't print to my Hewlett Packard plotter from MacDraw Pro. Why not?

DISCUSSION --

The MacPlot driver for the Hewlett Packard plotter must be configured in a
particular way under System 7. According to Microspot's technical support,
this is the setup:

1) Put the driver in the Extensions folder.

2) Select the plotter in the Chooser.

3) Pull the driver out of the Extensions folder to the top level of the
   System Folder.

4) Configure the plotter through the Configure Application.

4) Put the driver back into the Extensions folder.

5) Make an alias of the driver and place it at the top level of the System
   Folder.

The driver is bundled with MacDraw Pro and is also sold separately by
Microspot. If the driver was bundled with a Claris product, please call
Claris for technical support instead of Microspot. To locate a vendor's
address and phone number, use the vendor name as a search string.
