TrueType Fonts: Installing on Macintosh Plus with No Hard Disk

Article Created: 28 October 1992

TOPIC ---

I have a 1MB Macintosh Plus with no hard disk, and I just purchased a
StyleWriter printer. I want to print with TrueType fonts, but without
a hard disk I have little room on an 800K disk. Is there a solution?

DISCUSSION --

Here are the steps to get TWO TrueType fonts on the disk and have
about 46K left.

Follow these steps to install the minimal system software:

1) Format an 800K disk.
2) Run the install from the System 6.0.7 disk.
3) Be sure to click on Switch Disk and Eject Disk buttons as needed.
4) Insert the new formatted disk and do a minimum install for Macintosh
   Plus (this leaves about 435K available).

Follow these steps to install the StyleWriter software:

1) Insert the StyleWriter Installation disk.
2) Custom install for the TrueType (INIT) - 101K and the StyleWriter
   driver (163K).

You should now have about 150-170K available.

Follow these steps to install the individual TrueType fonts (remember that the
fonts each take up 60-70K):

1) Insert the TrueType fonts disk from the StyleWriter package.
2) Open the Font/DA Mover.
3) The right window should show information (fonts) in the System file.
4) Click on Open in the right window.
5) Shift-click to select the desired fonts. (Please note at this point you
   probably can only select two fonts because of minimal space left on the
   disk.)
6) Click on Copy.
7) Restart the computer from your new startup disk.
