System 7: File Sharing vs. Publish and Subscribe on a Network

Article Created: 7 March 1991

Article Change History

09/22/92 - REVIEWED

- For technical accuracy.

TOPIC -----

What's the difference between file sharing and publish and subscribe across a network?

DISCUSSION -----

File sharing shares entire folders (and their contents) and hard disks between users on the network. Assuming you have been given permission, you can view and edit documents just as if they were stored on your local hard drive.

Publish and subscribe lets users share sections of documents between themselves by placing the connecting edition file on a file server.
