HSU 2.0.1: Install After System 7 Pro Install (2/94)

Article Created: 23 February 1994

TOPIC -----

Should I install Hardware System Update (HSU) 2.0.1 on top of System 7 Pro?

Why?

DISCUSSION -----

Yes, you should install HSU 2.0.1 over System 7 Pro.

The Apple Installer Script, version 1.0, REMOVES HSU if it's installed, and doesn't replace it with a new copy. Installer Script 1.0.1 fixes this problem. There are approximately 18,000 System 7 Pro copies that have Installer Script 1.0. If you suspect that HSU was removed from a system, check the Extensions folder for Hardware System Update. If it isn't there, install HSU 2.0.1 again.

The HSU that Apple Installer Script 1.0.1 installs is exactly the same as the one the Hardware System Update disk installs, except the creation date is earlier.

If you install System 7 Pro with Custom Install on a system that already has HSU 2.0.1, you'll see a dialog box which says that the existing version is newer and asking whether you want to replace it. Since the HSU files are also found in System 7 Pro and are the same except for creation date, you can either replace or leave the existing file.
