System 7.1: Compatibility with Third-Party Applications

```
Article Created: 19 October 1992

TOPIC -----------------------------------------------------------

Will I have to upgrade my applications to run with System 7.1?

DISCUSSION ------------------------------------------------------

Most applications that are compatible with System 7.0 and 7.0.1 are also
compatible with System 7.1, although there are a few exceptions.

To determine if the applications you are using will compatible with System
7.1 when you upgrade:
```

- For System 6.0.X users, run Compatibility Checker 2.0, which is included
  with your System 7.1 Upgrade Kit on your hard drive. Compatibility
  Checker 2.0 contains compatibility information on approximately 3500
  applications.

- For System 7.0 and 7.0.1 users, check the Software Compatibility list
  included in the 7.1 Update Kit.
