TOPIC ---

How are INITs loaded in System 7?

DISCUSSION --

In System 7, INITs are referred to as "system extensions." The system looks
for extensions in three places when loading them at boot time:

• First, it looks in the Extensions folder (located in the System Folder).
  This is the proper place to put your compatible INITs or system extensions.
• Second, it looks in the Control Panels folder (also inside the System
  Folder).
• Third, it loads any extensions it finds at the root level of the
  System Folder itself.
