System 7 KanjiTalk: Supports JIS x0208 Character Set

Article Created: 17 December 1992

TOPIC ---

Which character sets are supported by KanjiTalk System 7: JIS X 0208-1990, JIS X 0212-190, UNICODE/ISO DIS 10646, or something else?

DISCUSSION --

Supported Character Set

KanjiTalk supports the JIS x0208 character set. Some of the fonts have extra characters newly created in JIS, but they don't have a number yet.

Unsupported Character Sets

JIS x0212 is the extension to JIS x0208, and it's sometimes referred to as JIS level-3 (Note: JIS x0208 defines JIS level-1 and level-2). This character set isn't supported in KanjiTalk 7.

Unicode and ISO DIS 10646 are actually two different specifications, though 16-bit encoding of ISO 10646 took the Unicode specification. KanjiTalk 7 doesn't support Unicode or ISO 10646.
