Macintosh: Determining File Sharing Access Levels (2/95)

Article Created: 24 January 1995

Article Reviewed/Updated: 22 February 1995

TOPIC -----

This article contains a description of how to determine folder access levels of folders contained on file servers.

DISCUSSION -----

Types of access privileges =====

Access privileges govern what you and other users of a file server can see or alter. The following table lists the access privileges that you must have in order to perform the listed actions:

Function	See Folders	See Files	Make Changes
Copy a file to a folder			X
Copy a file from a folder	X	X	
Copy a folder to a folder	X		X
Copy a folder from a folder	X		
Create a file	X	X	X
Create a folder	X		X
Delete a file		X	X
Delete a folder	X		X
Move a folder to a folder	X		X
Move a folder from a folder	X		X
Open and use a file		X	
Save changes to a file		X	

Finding Out What Privileges You Have =====

You can determine your access privileges by looking at the folder icons:

.	Owner of Folder	Some Folder Access	No Folder Access	Only Make Changes
.	-----	-----	-----	-----
AppleShare 3.0	Tabbed	Plain	Dimmed	Dimmed w/Arrow

AppleShare 4.0	Tabbed	Plain	Strapped	Strapped w/Arrow
System 7.x*	Tabbed	Plain	Strapped	Strapped w/Arrow

* System 7.x Personal File Sharing

NOTE: A folder with a custom icon does not always indicate access privileges.
