RAM Disk: Cannot Create With Less Than 4 MB RAM (7/95)

Article Created: 19 October 1994

Article Reviewed/Updated: 06 July 1995

TOPIC -----

I cannot turn on my RAM disk since I upgraded to System 7.5. What is wrong? I am using Memory control panel 7.1.3

DISCUSSION -----

With the 7.1.3 Memory control panel, the RAM disk cannot be turned on with less than 4 MB of RAM. When you open the control panel, the RAM disk option appears briefly and then disappears. At least 6 MB of RAM is required to use a RAM disk. This behavior is different than previous Memory control panels.
