Macintosh Performa: System 7.5 Installation Problems (5/95)

Article Created: 31 October 1994
Article Reviewed/Updated: 18 May 1995

TOPIC ---

I am trying to install System 7.5 on my Macintosh Performa computer, but it
fails the installation. Each time I try the installation, I get a generic error
message saying it cannot install System 7.5 on my hard drive.

DISCUSSION --

You may have a folder lock conflict.

Prior to System 7.5, the Macintosh Performa computers used a slightly modified
version of System 7.x. One of the additional control panels is the Performa
Control Panel. It provides folder protection by locking the folder so items
cannot be accidentally removed. Only the System folder and the Application
folder can be locked using the Performa control panel.

Before you can install System 7.5, you have to turn off System folder protection
in the Performa control panel. Under System 7.5, you can turn System and
application folder protection off and on using the General control panel.
