System 7.5.2: Available for Earlier Macintosh Computers? (4/96)

Article Created: 21 June 1995
Article Reviewed/Updated: 10 April 1996

TOPIC ---

I heard that Apple has released System 7.5.2 on its PCI-based Power Macintosh
computers. I was wondering if and when Apple will make it available as an
upgrade to System 7.5.1?

DISCUSSION --

System 7.5.2 is a hardware specific release that currently runs on the new Power
Macintosh 7200, 7500, 8500, and 9500 systems, as well as the PowerBook 190,
2300, and 5300 computers. System 7.5.2 is based on System 7.5.1 with specific
enablers for each of these systems. The components of this release do not
function on earlier Macintosh systems.

However, many of the new technologies included in System 7.5.2 have been
included in the recent system update, System 7.5 Update 2.0, which you can use
on these and earlier Macintosh computers. After installing System 7.5 Update
2.0, you will have System 7.5.3 installed on your computer.

These articles can help you locate the software update mentioned here:

• "Where To Find Apple Software Updates" - Lists online services for free Apple
software updates.

• "Obtaining Apple Product Support in the USA" - Lists 800 numbers and online
services for software updates, Apple support information, and a subset of the
Apple Tech Info Library.
