System 7.5: Unable to Drag Items from Find File Window (8/95)

Article Created: 14 August 1995

TOPIC -----

I am running System 7.5.1 on my Macintosh computer. I noticed I am no longer able to drag items from the top half of the Items Found window when I use Find File to search my hard drive. I used to be able to do this. What is wrong?

DISCUSSION -----

The Find File application uses AppleScript to execute some of its functions. It also requires an extension called the Finder Scripting extension to perform these functions.

You should make sure the Finder Scripting Extension is in the Extensions folder of your System Folder and that it has not been disabled in the Extensions Manager control panel.

If you cannot locate the Finder Scripting extension on your hard drive, you will need to reinstall it by reinstalling your system software.
