## System 7.5 Update 2.0: Installer May Not Use All Disks (4/96)

Article Created: 29 March 1996

Article Reviewed/Updated: 9 April 1996

TOPIC -----

While going through the installation procedure for System 7.5 Update 2.0, I noticed that not every disk was required. However, it seems to have installed everything. Why didn't I need all of the disks?

DISCUSSION -----

The System 7.5 Update 2.0 installer may not use all of the disks during installation. This is a normal behavior of the installer, and which disks are used depends on the type of computer and software you have pre-installed and whether you do an Easy or Custom Install.
