System 7.5 Update 2.0: Monitors & Sound Gamma Settings (5/96)

Article Created: 9 April 1996
Article Reviewed/Updated: 20 May 1996

TOPIC ---

I have a Power Macintosh 7200/75 computer, System 7.5 Update 2.0, Apple Multiple
Scan 15 Display. I recently upgraded to System 7.5.3 by installing the System
7.5 Update 2.0.

I am now using the Monitors & Sound control panel. If I change just the Gamma
setting, a prefs file is not created and saved. Likewise, if there is an
existing prefs file, it is not updated if I change only the Gamma setting. Why
is this happening? How can I work around it?

DISCUSSION --

We were able to reproduce this symptom using a Power Macintosh 7200/75 computer
running System Update 2.0 and a 15 Inch Multiple Scan Display.

One workaround we discovered is that if you change both the Resolution as well
as the Gamma settings in the Monitors & Sound control panel, it seems to lock in
the setting after you restart the computer. This is one way to save the changes
you have made.
