System 7.5, Version 7.5.3: Installing OpenDoc Read Me (6/96)

Article Created: 20 June 1996

Article Reviewed/Updated: 28 June 1996

TOPIC -----

This article is the Installing OpenDoc ReadMe file.

DISCUSSION -----

OpenDoc technology supports a new type of software called a "part." You use parts to easily add new features to your applications. You add features by dragging parts into documents created by any OpenDoc-aware application. You can also create documents entirely out of OpenDoc parts.

Installing OpenDoc

To install the OpenDoc libraries and extensions that will enable you to use OpenDoc parts, double-click the OpenDoc Installer alias.

When the Easy Install dialog box appears, click Install.

NOTE: To install OpenDoc, you must be using system software version 7.1.1 or later for a 68K Macintosh, or system software version 7.1.2 for a Power Macintosh.

Installing over previous versions of OpenDoc

Before installing over an older version of OpenDoc, turn extensions off by holding down the Shift key as you restart the computer.

Getting more information

For more information about OpenDoc and developers who are producing both OpenDoc parts and OpenDoc-aware applications, look on the World Wide Web at <http://opendoc.apple.com>.
