System 7.5.5: Needs System 7.5.3 Error Message (10/96)

Article Created: 15 October 1996

TOPIC --

When installing System 7.5.5 I received an error message indicating that I need
System 7.5.3 installed, however, System 7.5.3 is already installed. Is there a
problem with the System 7.5.5 installation disks?

DISCUSSION ---

System 7.5.5 will only install after System 7.5.3 has been installed. If the
System 7.5.5 installer produces the error you describe and System 7.5.3 is
installed, check to be sure you have not renamed any system files. Two files,
when renamed, have been found to cause the install issue you describe, their
original final names are:

System 7.5 Update
System 7.5.2 Update

When updated to System 7.5.3, the System 7.5 Update file is for a system updated
from System 7.5, while the System 7.5.2 Update file is for a system updated from
System 7.5.2.
