Mac OS 7.6: Installs Open Transport 1.1.1 (1/97)

Article Created: 20 January 1997

TOPIC ---

What version of Open Transport comes with Mac OS 7.6?

DISCUSSION --

Mac OS 7.6 ships with Open Transport (OT) version 1.1.1. Open Transport 1.1.2
was completed after the date that Mac OS 7.6 was closed for new component
submissions, therefore OT 1.1.1 was used.

If you install Mac OS 7.6 on top of a system that already has OT 1.1.2
installed, you get the error "The file "File Name" already on "Hard Disk Name"
is more recent than what you are about to install. Click Continue to replace
"File Name" with the older version. Click Cancel to leave the disk "Hard Disk
Name" untouched".

If you have Open Transport 1.1.2 installed, you get this error dialog seven
times during the installation process. The following files need to be replaced
during this process:

OpenTransportLib
OpenTptInternetLib
OpenTptAppleTalkLib
Open Transport Library
Open Tpt Internet Library
Open Tpt AppleTalk Library
TCP/IP

This message occurs because there are resources in the System file specific to
the OT 1.1.1 in the 7.6 system file. To avoid a mismatch of Opent Transport
componenets, and compatibility problems, the Installer removes OT 1.1.2, and
installs OT 1.1.1. After installing System 7.6, with Open Transport 1.1.1, you
may reinstall OT 1.1.2 and it will work fine.

The Open Transport 1.1.2 Read Me file contains a list of changes made to Open
Transport. This read me file is available in the Tech Info Library articles
"Open Transport 1.1.2 Read Me - Part 1" and "Open Transport 1.1.2 Read Me - Part
2."
