Mac OS 7.6 CD and Computers With 8 MB RAM (2/97)

Article Created: 7 February 1997

TOPIC -----

Mac OS 7.6 CD's packaging and manual list the memory requirements as, "8 MB installed RAM, with an additional 8 MB through installed RAM or Virtual Memory."

DISCUSSION -----

The memory requirements as listed on the packaging and manual are correct. However, an optional installation of QuickDraw 3D requires at least 16 MB of installed memory. The Apple Internet Connection Kit 1.2, included with the Mac OS 7.6 CD, requires at least 12 MB of installed memory. Therefore, if you install some of the software included on the Mac OS 7.6 CD, you will need more than 8 MB installed RAM.
