## Mac OS 7.6: Seeing Duplicate System Folders (2/97)

Article Created: 14 February 1997

TOPIC -----

I recently performed a clean system installation of Mac OS 7.6. When I restarted the computer I saw a duplicate system folder. Clicking around in the window made the duplicate system folder disappear but after another restart, the duplicate was back. What is wrong?

DISCUSSION -----

Mac OS 7.6 and earlier versions of the Mac OS, like 7.5.x, are not the cause of this behavior. If you have installed Desktop Printing and have not selected a printer in the Chooser, double system folders may appear. This is a Desktop Printer issue.

To correct this, select a printer in the Chooser and a duplicate system folder should not reappear.
