Macintosh Finder: Print Directory Workaround

Article Created: 17 July 1990
Article Last Reviewed: 19 July 1991
Article Last Updated: 19 July 1991

TOPIC -----

I have a problem printing a disk directory from the Finder while in "View by Name" mode (running System Software 6.0.5 with the LaserWriter 6.0.1 and 5.2 drivers).

Black areas are printed on the pages along with the correct information. Sometimes, the areas are narrow, running along the right side of the page. Other times, the areas are broad, running right through the middle of the page. It is NOT a problem with the toner cartridge, as the black areas have a definite pattern like a scaled graphic character.

DISCUSSION -----

When you choose Print Directory for the directory of a folder or disk that has one or more locked files, and with the view set to something other than Icon or Small Icon, the pixels for the padlock are printed like fat bits on top of (or next to) the text. The size of the padlock (usually very distorted) varies.

You can work around the problem under MultiFinder by turning on background printing.

This has been fixed in System 7.
