TOPIC ---

This articles describes using PrintMonitor with System Software 5.0

DISCUSSION --

Some Macintosh users, running System 5.0, have discovered that background
printing can't be selected in the Chooser.

This situation is probably due to the PrintMonitor and LaserWriter drivers
having been installed using the "drag" method.

With System Software 5.0, it is necessary to use the "Background LaserWriter
(5.0)" installer script on System Tools Disk #2 to use background printing.
After installation is complete you must select a LaserWriter as the print
device; then the Background Printing option becomes available in the Chooser
window.

(NOTE: This procedure is NOT necessary with System Software 6.0.)
