LaserWriter Driver: Will Not Print To LW With Password

Article Created: 4 December 1989
Article Last Reviewed: 5 November 1991
Article Last Updated: 4 December 1989

TOPIC -----

Can the LaserWriter IINTX set an "exitserver" password? Is an exitserver password insufficient to prevent settings from being changed?

DISCUSSION -----

The LaserWriter IINTX CAN have a password, and that password is sufficient to prevent settings in the LaserWriter from being changed.

More importantly, the only password in the LaserWriter family (PostScript) of printers is the system administrator password. If this password is set to anything other than "0", the LaserWriter will not work with the LaserWriter drivers from Apple. If the password is set to zero, the LaserWriter effectively has no password. The LaserWriter drivers expect the LaserWriter to have no password and will not print to a LaserWriter with a password.
