Laser Prep: Must Be In Sync With LaserWriter Driver

Article Created: 14 June 1991
Article Last Reviewed: 15 July 1992

TOPIC -----

I'm having problems with printing from my Macintosh since upgrading my Laser Prep file. I keep getting "Print Monitor unexpectedly quit" errors and lock-ups.

DISCUSSION -----

There is no upgrade of just the Laser Prep file. LaserWriter and Laser Prep must be upgraded together. For example, you need to use LaserWriter 5.2 with Laser Prep 5.2 or LaserWriter 6.0 with Laser Prep 6.0.

Note however that Laser Prep is no longer required as of version 7.0 of the LaserWriter driver. The System 7 version of the driver sends the prep information along with each print job. Any Laser Prep files that for some reason remain in the System Folder will not cause any damage, but also will not help printing. They can be trashed.
