System 6.0.4 Installer: How to Access the Remove Button

This article last reviewed: 29 January 1990

TOPIC --

The new Installer is great, but it appears to be missing the ability to remove
previously installed resources. Will this be fixed?

DISCUSSION ---

That is a great idea and, fortunately, that feature is already part of the
"new" Installer, version 3.0 which ships with System Software 6.0.4.

To invoke it, either hold down the Option key while launching the Installer, or
after launching the Installer, press Customize, then hold down the Option key.
Note that holding down the Option key changes the "Install" button to a
"Remove" button. Releasing the button key changes to button back to Install.
