LaserWriter and System Software for Mixed Installations

This article last reviewed: 16 June 1988

Anyone dealing with a variety of Macintosh models (including Macintosh 512Ke systems) in work group networks with a recent LaserWriter model (such as the LaserWriter IINT) needs to be aware of the different combinations of System/Finder versions and LaserWriter software. The Tech Info Library article "Macintosh: Recommended System Software Configurations" contains most of the information needed to determine which System/Finder versions to use on each system.

LaserWriter versions later than 4.0 offer the advantages of faster and larger bitmap printing and overall faster operation. However, Apple does not recommend the use of LaserWriter drivers later than 4.0 when using Macintosh 512K or 512Ke systems.
