Macintosh: No Restriction on System Folder Location

This article last reviewed: 11 October 1989

TOPIC -----

Is there anything wrong with having the System Folder located within another folder on the Macintosh desktop?

DISCUSSION -----

The System Folder can be located on the Desktop, the root level, or anywhere in the volume hierarchy. There is no restriction on where the System Folder can be located. We suggest locating the System Folder at the root level of the volume, because the folder is accessed so often.
