TOPIC ------------------------------------------------------------

I just got a copy of System 6.0.7. I know it is for the Macintosh Classic,
LC, and IIsi, but does Apple recommend it for the Macintosh IIfx and the
other Macintosh computers?

DISCUSSION -------------------------------------------------------

System 6.0.7 is compatible with all Macintosh computers from the Macintosh
Plus on up.  The only time it is required on the older computers is if
you're using an Extended Keyboard II (the one that comes with the Macintosh
LC).
